

Creation

Creation

Lighting, Automation and Project Management

About Creation

Creation is a leading systems integrator and solutions provider of lighting, automation and guest room management systems. Project Management is another core area of excellence where our specialist engineers continuously monitor, maintain, retrofit and refurbish existing projects of lighting and automation systems at various facilities around the region. Creation has since inception, undertaken a variety of turnkey projects to include the design, supply, testing & commissioning, and maintenance of lighting and automation systems. Well reputed as a professional firm that excels in translating vision into reality, we attribute our success to a *customer-centric approach* that lays emphasis on delivering both - premium quality and consistent value.

Our distinctive line up of over 500 successful projects throughout the GCC and India feature luxurious hotels and palaces, designer homes for royalty and high networth individuals, restaurants, office complexes, retail shops and commercial & industrial establishments. We offer a wide range of aesthetically pleasing and technically advanced solutions to meet the needs of a diverse range of customer requirements.

Our specialized team of sales and service engineers are committed to delivering projects on time whilst keeping with the customer's requirements and budget guidelines. There's always a solution in sight once you reach **Creation**.

"Delivering turnkey solutions that includes design, supply, testing and commissioning of lighting, lighting control system and automation."

FLAGSHIP PROJECTS

Qasr Al Hosn, Abu Dhabi

King's College Hospital London, Dubai

Parkway Vistas & Fairway Vistas Villas, Dubai

Carnival by Tresind, Dubai

Hilton Residences, Bangalore

Yas Hotel by Marriott International, Abu Dhabi

Jumeirah Al Naseem, Dubai

Qasr Al Hosn

Client: Department of Culture and Tourism
Consultant: GHD
Contractor: Voltas Limited

Scope: Supply, Installation, Testing & Commissioning of
Lighting Control System
Time of Execution: 6 months

Qasr Al Hosn is considered the birthplace of the UAE Capital. Constructed in 1790s, it is the Emirate's first permanent structure, which was home to its ruling family.

This iconic fort is part of the Cultural Foundation which was launched in 1981 and comprises the city's first library, exhibition hall, and theatre. Recently, the 23,000 sq.m. building saw a \$136m (AED500m) makeover that included extensive refurbishment and upgrade work. Local contractors Voltas Limited called on Creation to Supply, Install, Test and Commission the Lighting Control System for the Cultural Foundation Building, Pocket spaces, External areas, Fountain areas, and Parking structures. The project which took over six months to finish was replete with challenges as each area had its own unique design and concept. It was as if we were working

on multiple projects simultaneously which finally had to be integrated with each other.

Creation put forward Helvar as the brand of choice throughout the project. The concept for each area kept changing before the final design was approved. Consequently, we redesigned the system and its components to ensure we match the design intent. Besides this, the time-frame for the on-site execution was very tight and called for precise planning and coordination. Many a times, the site conditions challenged us to come up with impromptu and innovative solutions.

The resuscitation of Qasr Al Hosn is not about redoing façades and going modern with the interiors. Rather it is all about celebrating Abu Dhabi's humble beginnings and delving back into the pages of time and into a way of life that deserves to be celebrated.

King's
مستشفى كينجز كوليدج لندن
King's College Hospital London

King's
مستشفى كينجز كوليدج لندن
King's College Hospital London

King's College Hospital London

Client: King's College Hospital London
Consultant: DAR / WME
Contractor: Shapoorji Pallonji Middle East

Scope: Supply, Testing, and Commissioning of Light
Fixtures & Lighting Control System
Time of Execution: 12 months

After successfully launching 3 Medical Centres in UAE since 2014, King's College Hospital London opened up its state-of-the-art 100-bed facility at Dubai Hills, Mohammed Bin Rashid City in January 2019.

Shapoorji Pallonji Middle East, the main contractors on the project, needed a comprehensive Lighting and Controls solution which matched the design intent, was simple to install, and easy to operate. Their search ended at the door-step of Creation.

The multi-specialty hospital covers a sizeable area, and called for an entire gamut of light fixtures from varied manufacturers to achieve the lighting design intent.

For Controls, a Helvar based DALI Control solution through-out the project was the perfect

fit. The installed system was programmed for various concepts such as Daylight Saving, Presence/Absence Sensing, Control Plate based Scene Setting, and Timer based operations.

The parameters were quite stringent. UGR values required had to be less than 19. WME- the project consultant was committed to CIBSE guidelines in product selection and our lighting design matched the design intent as well as those markers.

The mammoth project came with its own challenges. The Design Intent and on-site conditions would normally have called for extensive cabling. However, we came up with a unique solution that was designed with multiple relays as field devices and Ethernet networking between floors which significantly reduced wiring and complexities in installation.

Parkway Vistas & Fairway Vistas Villas

Client: Emaar

Consultant: Whitespace Architects

Contractor: Parkway International Contracting

Scope: Supply of Light Fixtures

Time of Execution: 10 weeks

Creation's latest flagship project is undoubtedly Emaar's "The Parkway Vistas" & "The Fairway Vistas" – a premium golf championship community of 126 luxurious villas overlooking an 18-hole golf course at the stunning Dubai Hills.

A premium project calls for premium solutions and the Contractor Parkway International entrusted this responsibility to us. During the course of the project, we also had the pleasure of working closely with Whitespace Architects-architect and consultant for the project.

Due to multiple levels of approvals required at different stages, we evaluated and proposed multiple options to ensure we completely met requirements of the client, architect & consultant. Our Engineers ensured that all stakeholders were satisfied with the quality and designs of all the fixtures to provide high quality light fixtures that gave a rich, warm effect.

Creation is a name associated with quality and to be able to execute a project as high end as The Parkway Vistas & Fairway Vistas is a testimony to our commitment to offer the best value, products and services to our clients.

Carnival by Tresind

Client: Passion F & B
Consultant: DPA Lighting, Dubai
Contractor: Exceptional Interior Design

Scope: Supply, Testing, and Commissioning of Light Fixtures & Lighting Control System
Time of Execution: 8 weeks

Carnival – Dubai’s latest uber chic eatery at DIFC is a fun-fair themed restaurant designed by Modo Milano. It is DPA’s lighting design and Creation’s dimming systems that have breathed light into the exotic space that embraces a cascade of rich prints, colours and textures. The fun filled ambience comes alive through a range of lighting features that include smooth transitions, adjustable fade times and a time clock to deliver just what the designers had conceived an unreal, mythical even space where food, fun and frolic rule supreme.

Mode Lighting U.K.’s dimming systems, Pharos Controls DMX control systems, Forma Lighting Italy’s track lights along with scene settings over

the reception area, the display windows, the general dining section, the bar and private dining space has the restaurant’s ambience always set to warm and cozy. X-LED, Germany’s RGB Nodes were implemented for the bespoke bottle display and this called for the customization of the pixel pitch which had to match the site requirements.

For Creation to be able to integrate a system from multiple brands such that the end user can enjoy a single system with an identical user interface for both the dimming and DMX control system is a reflection of our sheer expertise in finding simple solutions to resolve complex challenges.

* Nominated for
LME Awards 2016

Hilton Residences

Client: Umbel Properties
Consultant: DPA Lighting, UK
Contractor: Synergy Property Development Services Pvt. Ltd.

Scope: Supply of Light Fixtures for Guest Rooms and Public Areas
Time of Execution: 6 months

Overlooking the Karnataka Golf Course, The Hilton Residences, is a modern hotel located within Embassy Golf Links Business Park - the hub of several Fortune 500 companies in Bangalore, India.

To convert DPA Lighting's plan to reality, Creation was brought on board. We tapped a variety of manufacturers from Europe to ensure that the light fixtures in the guest rooms and public areas matched the original design specifications laid down by DPA Lighting.

While it is relatively simple to supply a fixture specified by a designer, finding an equivalent to match the original as closely as possible entails a whole new degree of difficulty, especially in the wake of time and budgetary constraints.

Today, the Hilton Residences stands as a feather in our list of projects because it bears testimony to our skills of meeting (not only client's but the designer's) needs capably and efficiently. More importantly, we added one more satisfied high-profile customer to our existing list.

Yas Hotel by Marriott International

Owner: ALDAR
Operators: Marriott International

Scope: Project Management and Engineering
on the Grid Shell
Time of Execution: Annual Contract

Bringing the Yas Hotel by Marriott International alive is the pixelated lighting design of its Grid Shell canopy. Thousands of LED lights create a dynamic presence in the night sky with colours floating smoothly across its double curved surface.

Yas Hotel by Marriott International, Abu Dhabi is an amazing architectural landmark located within the Yas Marina Circuit. It is the first hotel in the world to be built over an F1 race circuit.

Of architectural and engineering significance, is the Hotel's main feature: a 217-meter expanse of sweeping, curvilinear glass and steel covering known as the Grid Shell. It features an LED lighting system incorporating video feeds that are transmitted over the 5,389 pivoting diamond-shaped colour changing LED panes. This Grid Shell component is a key aspect of the overall architectural design and significance of the project by producing an atmospheric-like veil visible from miles away.

However, few know that there is much beneath what keeps the sparkle of this much loved architectural wonder alive. Seven years into its operation, Creation was responsible to replace the faulty fixtures of the Grid Shell-critically

just two months before the F1 races were scheduled!

Within 60 days our Engineers had to diagnose the complicated software and hardware problems, replace the faulty fixtures, test, repair and offer remote support for all miscellaneous issues, and undertake software maintenance to ensure smooth flow of specialized programming whenever required.

It is the core expertise of our trained team of Engineers that ensures that all the lighting systems of the Grid Shell are always ready to go, often at short notice. We provide all the technical support on the driver, power supply, and also maintain the DMX Lighting Control Systems that controls the dynamic lighting on the Grid Shell and operates various shows as required.

It is a measure of our capability and successful Project Management skills and strategy that has resulted in achieving optimum efficiency at this site. Needless to say that the challenges have been numerous and only those engaged in continuous background technical support, repair and maintenance truly understand what it means to have a happy client.

Jumeirah Al Naseem

Client: Jumeirah Group
Consultant: CKR Consulting Engineers / DPA Lighting
Contractor: BK Gulf

Scope: Supply, Testing & Commissioning of Lighting Control System
Time of Execution: 36 weeks

Jumeirah Al Naseem in Dubai is one of the world's finest luxury resorts.

Called in to supply, test and commission the lighting control systems in public areas such as the main lobby, lounges, restaurants and the pools, we have integrated the complete dimming system with the existing IT network. The operator can monitor, control, and program the system using their Smart Phones, Tablets, or PC over Wi-Fi without the need of any specialized licensed software.

This integration enabled by 'Internet of Things' has created smoother operational efficiency and sustainability because machines, computers and people are talking to each other on the Internet.

This project also needed pre-wiring, customization of enclosures for every area and the electrical protection devices before delivery. Given the project's size, location and the need for a robust system we convinced stakeholders of Mode Lighting's suitability for the project. Finally, it was a successful product demo of Mode Lighting control systems that clinched the deal.
